

TPWind session description

The Wind Energy Roadmap (WER) was published by the European Commission on October 7th, 2009, in its Communication on Financing Low Carbon Technologies. This programme, rooted in the Commission's Strategic Energy Technology Plan (SET-Plan) and developed by the European Wind Energy Technology Platform (TPWind), is set to become one of the most important instruments for the support of wind power in the 2010 – 2020 period.

This event will provide participants with a detailed overview of the objectives, contents and implementing mechanisms of the WER, which has a total budget of €6bn for the next 10 years. Further to that, the event will report on TPWind's past and future activities.
